

## How to Plant Radishes

1. Acquire a tray of six-pack planting containers.
  - a. If your experimental methods call for something else, acquire the specific kind of planting tray that you'll need.

2. Add soil to the planting trays so that it is flush with the top of the tray.
  - a. Lightly pat the soil if loose to ensure proper soil compaction.

3. Make a pinky-fingernail-sized depression in each compartment of the six-pack planting tray.
  - a. Each of the six compartments of the six-pack tray should have one depression only.

4. Add ONE radish seed to each fingernail-sized depression.
  - a. Each compartment should have only ONE seed.

5. Fill in the soil on top of the seed. Pat lightly with your hand.

One seed per  
compartment!  
6 seeds per  
six-pack.

6. In an outside location with drainage, lightly water the soil so that it is moist (not soaking wet).

7. Label your radish trays with your...

- a. Hour
- b. Group Number
- c. *Treated* or *Control* labels

8. Move your radishes to the appropriate location for your experiment as indicated by your instructor.
