

PLAY-DOH SPAYING LAB

- In this lab you will be using Play-doh and a brown paper lunch bag to show how a dog is spayed. For this project you will need to...
 - Create all of the organs of a female dog's reproductive tract.
 - Arrange them inside the bag as if the bag were the abdomen of the dog.
 - Orally describe and physically demonstrate how the operation is performed.
- You will have time in class to create your organs and prepare your presentation.
 - When you are ready, raise your hand so that your instructor can listen to and watch your presentation.
- Be creative! For example, you might use a paper clip as a 'surgical clamp'.
